

As soon as
you use it,
you'll wonder how
you ever managed
without it.

Presenting Anestand.

Anestand is the first and only anesthesia stand designed to:

- Safely, securely and conveniently keep all anesthesia supplies where they're needed.
- Deliver the highest levels of safety, cleanliness, utility and organization.
- End instruments rolling off a patient's chest.
- Keep needleless connector available for medications and aid in regulatory compliance for IV port hygiene.

The many benefits
of Anestand are
obvious, every time
you use it.

Extremely easy to place and set up.

The patented clamp quickly and easily attaches *Anestand* to the IV pole or OR bed rail with just one hand — no knobs or screws to tighten.

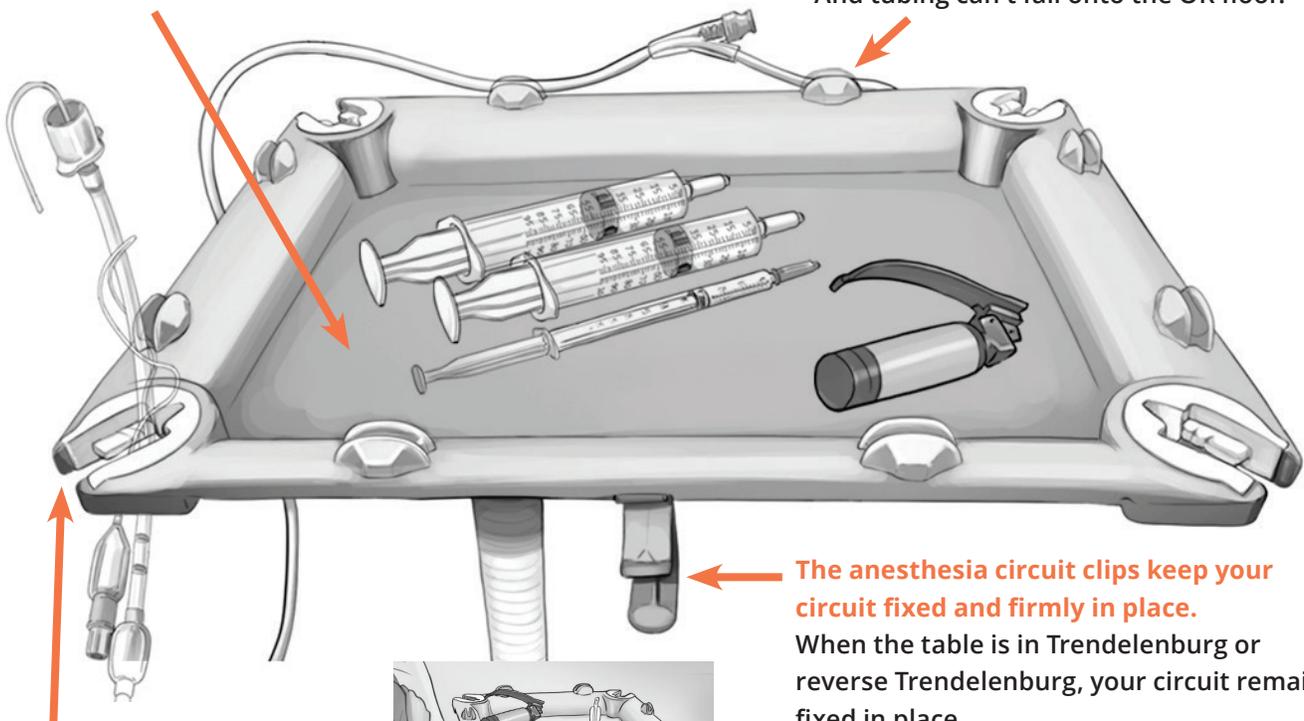

The recessed tray safely holds and organizes supplies for most procedures and can be used for induction of anesthesia.

Tray holds: central line kit, nerve block supplies, and spinal/epidural kit. Organized workspace to make an efficient induction.

Clips keep IV tubing securely in place, so it's easy to "scrub the hub."

Anestand makes it easy to comply with JCAHO's and CDC's "scrub the hub" program. And tubing can't fall onto the OR floor.

Corners hold suction tubing or suction tip.

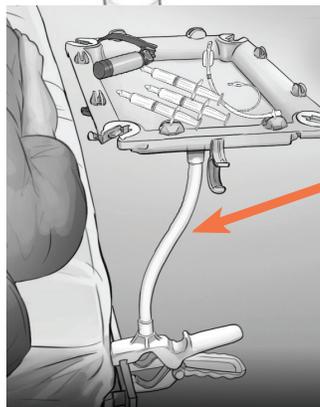

Easily organize EKG, pulse oximetry and blood pressure cords. And all cords stay off the floor.

The anesthesia circuit clips keep your circuit fixed and firmly in place.

When the table is in Trendelenburg or reverse Trendelenburg, your circuit remains fixed in place.

The flexible support post lets you position it just where you need it.

You can rotate or bend the post, making *Anestand* adaptable to any anesthetic situation.

It's like an extra pair of hands, wherever and whenever you need them.

Anestand frees up anesthesia technicians for other valuable duties — and works as helping hands.

TRAY & STAND #77003

 **Anestand**[®]
The anesthesia stand that
keeps everything right at hand.
