

Control-Cric™

Adding Control to an Otherwise Chaotic Procedure

- Surgical cricothyrotomy device for use in an emergency airway setting.
- Used when airway obstruction has occurred, or when a patient cannot be intubated or ventilated.
- Reliable and intuitive device, with a three step compact solution.
- Allows the clinician to maintain placement with an integrated sliding tracheal hook that sits within the knife.
- Provides tactile feedback of the tracheal rings, before placement of the tube by using an integrated stylet.

Control-Cric™ System- Sterile kit includes a Cric-Knife™, Cric-Key™, Neck Strap, Syringe, and extension tubing.
